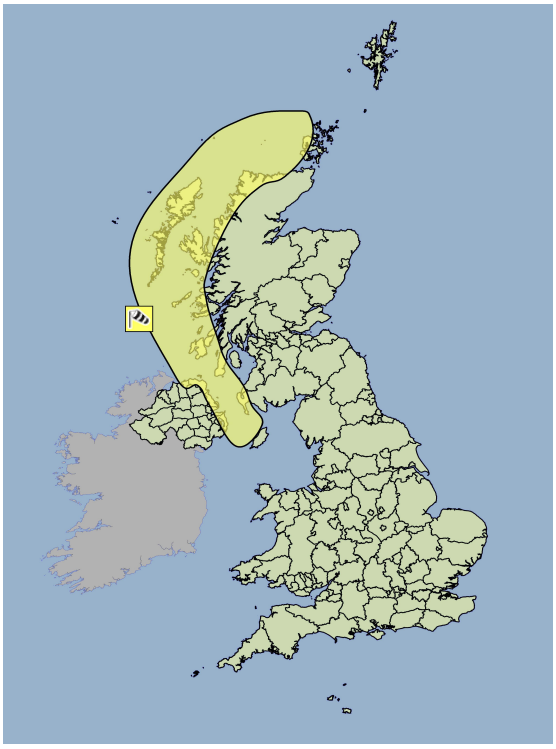
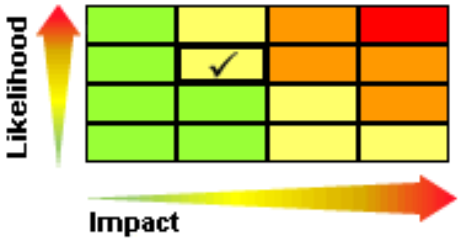
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
A deep area of low pressure is expected to develop near Iceland on Tuesday and then move southeastwards towards the northern North Sea on Wednesday. This will bring strong winds, especially so within the north to northwesterly flow on its rearward flank.

This warning has been updated to remove Shetland from the risk of severe gales, and to include more of the exposed Co. Down coastline.

The Met Office have issued a **Yellow Warning** of **Wind**

Valid from **03:00 on Wed, 20th Nov 2013** until **23:59 on Wed, 20th Nov 2013**

The north or northwesterly winds will increase during the early hours of Wednesday, with gusts perhaps reaching 60-70 mph in places.

The public should be aware that the winds are likely to be strong enough to cause some local disruption to travel, and possibly some minor damage to buildings and trees. The winds will slowly moderate from the west during Wednesday evening.
